

Maintenance tips

The @claryl effect remains at its very best with proper maintenance. In this way you will easily be able to keep the @claryl picture framing glass in top condition:

- ▶ To clean the glass, you should preferably use a clean, lint-free cloth made of cotton or paper. Make sure that the cloth does not contain lotion and does not scratch. Do not use a scouring pad, because you are likely to cause scratches.
- ▶ Use a glazing agent-free glass cleaning compound (where applicable a mixture of 75% mineralised water and 25% methylated spirit). It is preferable not to pour the cleaning agent directly onto the glass, but first onto the cloth.
- ▶ Clean the glass by applying rotary movements; in this way you will avoid streaking.
